Foodservice
Retail

Frylite is a supplier of fresh cooking oils and fats operating throughout the island of Ireland and supplying to over 12,000 customers. Frylite also provides a waste oil, fats and food waste collection service again operating throughout the island of Ireland. The waste oils and fats are collected and bulked up at each of our 6 depots across the island of Ireland before being transported to Frylite Strabane for processing. Processed used oil is then sold into biodiesel production companies across Ireland, NI & UK, Europe. Food waste is collected currently in NI only and sent to anaerobic digestion facilities for the production of

electricity, biogas and fertiliser.

Why Us

Offer a circular solution for the sale of food oils and the collection of that used material to process for biodiesel production, contributing to the circular economy, sustainability solutions and reducing carbon impact. Our plastics are washed and reused and when expired they are sold to plastics reprocessor. Developing sustainability solutions for how we operate from running our extensive fleet on electric and biogas to using renewables to fuel our processing plant. Sludges and effluents generated from our process are sold into AD plants to further generate renewable energies.

Our product range

"All products in the range (BRC Category No. 18):

- Rapeseed Oil With MPS
- Rapeseed Oil NO MPS
- Soyabean Oil With MPS
- Sunflower Oil
- KFC Blend (Soro or Horro)
- Superior Blend
