The Rye River Brewing Company was established in November 2013. Just a few years on, the brewery employs over 40 people and produces a range of over 20 beers - including 10 McGargles beers.

The magic of the Rye River Brewing Company comes from the talent and ingenuity of its brewing family. It's team of six brewers - including its

very own yeast propagator, Alex Lawes - is behind this range of great tasting beer.

Its passion for all things beer-related is proven by its creation of great taste, coveted by discerning beer lovers worldwide. Rye River's brewers have worked hard to form relationships with hop growers and unions in the US and around the world. The company purchases direct from the producers, meaning the freshest and most aromatic hops are used in its beers. It also propagates its own liquid yeast in-house as opposed to purchasing powdered yeast.

Why Us

What distinguishes Rye River beers from other beers is the quality of ingredients used, in conjunction with its brewing technique.

Rye River builds a perfect brew by treating its water just as gingerly as it treats the rest of its ingredients. Using a reverse osmosis system, the water profile is stripped back allowing the brewers to recreate the water profile for each beer. While a costly exercise, it makes for the very best beer.

The base for every beer is a high quality, traditionally hand-turned barley that delivers a flavour that is unmatched.
